CONTROL

WHAT CHANGES FROM DAY ONE

- ✓ **Urgent patients are seen first — automatically**
System flags emergencies before they sit down in the waiting lobby.
- ✓ **Receptionist has a screen, not a guess**
Priority order visible at a glance, always transparent and current.
- ✓ **Doctor walks in already briefed**
Chief complaint & vitals visible before the patient enters consultation room.
- ✓ **Every action logged with timestamp**
Full audit trail. HIPAA-ready. Zero extra administrative burden.

What happens every morning in your waiting room.

Most clinics run an excellent consultation. The chaos happens in the 5 minutes before the patient enters.

Serious cases wait behind routine ones

A child with 104°F fever sits behind three routine BP checkups. Nobody at the front desk has a way to know.

"The system has no way of knowing who needs to be seen first."

Staff decides urgency by instinct

Your receptionist makes this impossible call dozens of times a day — no tools, no data, no structured protocol.

"It depended on who was at the desk that morning."

75 minutes of consulting time lost daily

The first 90 seconds of every consultation is the doctor extracting intake history that could have been gathered at reception.

"50 patients × 90 seconds = 75 minutes. Every single day."

Three steps. Works on any phone.

No new hardware. No app download. No change to how you practise.

01

Patient scans QR at reception

Opens a simple form on their own phone. Enters name, age, primary complaint, pain level (0–10), and basic vitals. Takes 90 seconds.

NO APP NEEDED

02

AI assigns urgency using 15 parameters

The triage engine evaluates symptoms, vitals, pain score, and history. Categorises as Emergency, Red, Amber, or Green — instantly, objectively.

WORKS OFFLINE

03

Doctor sees a live priority queue

Dashboard updates in real time. Highest urgency always at top. Chief complaint visible before patient enters. One tap to call next. Override anytime.

FULL AUDIT TRAIL

Four levels. Instant assignment.

Doctor retains full override control at all times.

 EMERGENCY

Immediate Action

Chest pain, severe breathing difficulty, altered consciousness, life-threatening acute presentation.

Flags to doctor. Seen first. No exceptions.

 RED

Urgent

Severe acute pain, critical vitals, high fever with distress. Cannot safely wait behind routine cases.

Elevated in queue immediately on check-in.

 AMBER

Semi-Urgent

Moderate symptoms requiring timely attention. Managed within flow but above routine checkups.

Monitored for deterioration. Adjusts dynamically.

 GREEN

Routine

Mild or non-urgent symptoms. Follow-ups, prescription refills, routine checkups and reviews.

Standard queue. Full intake recorded.

 **This is NOT a diagnosis.** SwasthAI organises your queue. The doctor makes every clinical decision and can override at any time.

Walk into every consultation informed.

Before you open the door you already know the patient's name, why they are here, their pain level, and how urgent their case is.

- ✓ **Live priority-sorted queue**
Highest urgency at top always. Updates the moment a new patient checks in via QR.
- ✓ **One tap to call the next patient**
Call Next, Mark Treated, Override Priority. Three simple actions cover every scenario.
- ✓ **Every action logged automatically**
Timestamped audit trail for every override. Protects you legally and satisfies compliance.
- ✓ **Works on any screen, any browser**
Tablet, desktop, phone. Zero installation. Open a secure link and it runs.

Safer. Calmer. **Faster.**

Every OPD. Every morning.

Urgent patients are never delayed

The system identifies high-risk cases before they wait behind routine ones. The right patient goes first — automatically, every time.

Receptionist workload drops immediately

Your front desk stops guessing and starts managing. One screen shows everything. The anxiety of who do I call next disappears completely.

Queue logic is visible and trusted

Patients accept longer waits when the reason is clear. Every decision is based on clinical inputs — not guesswork or perceived favouritism.

Complete audit trail for every session

Every action, every override, every login is timestamped. Protects the clinic legally and satisfies regulatory requirements automatically.

 **IMPORTANT:** SwasthAI does NOT diagnose. It organises your queue. Doctor makes every clinical decision and can override at any time.

🚀 ZERO RISK CLINIC PILOT

Try it in your clinic. No commitment. No setup fee.

See what your morning OPD looks like when the queue organises itself.
Free 2-Day Trial · ₹0 Setup Fee · 10-Minute Reception Onboarding.
