

⚡ INTELLIGENT OPD QUEUE MANAGEMENT

See Urgent Patients First. **Every Single Time.**

A zero-friction, QR-based patient intake and clinical prioritization platform built specifically for high-volume outpatient clinics in India.

The First-In, First-Out Queue Bottleneck

In almost every Indian clinic, patients are seen strictly in the order they walked in.

Acute Cases Wait in Blind Spots

A child with 103.5°F fever or severe joint trauma sits behind routine follow-ups and prescription refills.

Front-Desk Friction & Guesswork

Receptionists face continuous arguments and are forced to make subjective triage decisions without clinical context.

Zero Pre-Consult Context

Doctors spend the first 3 minutes of every 8-minute consultation extracting basic symptoms from scratch.

Structured Intake to Prioritized Queue in 60s

Zero hardware needed. Operates seamlessly on existing patient smartphones and clinic tablets.

1

Patient Scans Desk QR

Upon arrival, patient scans a desk QR code. Zero app downloads. Opens instantly in mobile browser.

2

60-Sec Symptom Check

Patient answers structured clinical questions: chief complaint, onset duration, fever level, red-flag symptoms.

3

Doctor Priority Queue

Algorithm computes recommended priority score (Emergency/Red/Amber/Green). Doctor sees structured summary before consultation.

Doctor Retains 100% Final Authority

SwasthAI is an operational assistant, not a diagnostic engine. It surfaces critical walk-ins while keeping you in complete control.

-  **Absolute Override Authority**
Reorder, bump, or group patients with a single click at any time.
-  **Pre-Consultation Summary**
See chief complaint, duration, and red flags before opening the door.
-  **Offline-First Resilience**
Continues running locally during clinic Wi-Fi drops.

LIVE CLINIC CONSOLE PREVIEW

#104 — Aarav Sharma (4y)
High Fever (103.5°F) · Lethargy · 2 Days

EMERGENCY

#102 — Rajesh Verma (42y)
Severe Ankle Trauma · Inability to bear weight

URGENT

#101 — Meena Patel (29y)
Routine Medication Refill · Chronic follow-up

ROUTINE

Tailored for High-Volume Specialty Practices

Customized triage rule trees configured for your clinic's patient demographic.

Pediatrics

Catches febrile seizures, respiratory distress, and dehydration signs instantly.

Orthopedics

Distinguishes acute fractures and joint dislocations from chronic arthritis reviews.

ENT & Allergy

Highlights severe epistaxis, foreign body sensation, and acute ear pain walk-ins.

General Practice

Surfaces chest tightness, breathing difficulties, and extreme vitals irregularities.

Measurable Gains for Doctors, Staff & Patients

Transform the daily experience of your waiting room from day one.

Save 2–3 Mins / Consult

Pre-consultation summary eliminates repetitive symptom extraction, allowing focused clinical examination.

90% Drop in Lobby Arguments

Transparent queue display eliminates accusations of staff bias or skipped turns.

Enhanced Patient Trust

Patients appreciate knowing urgent conditions are spotted immediately rather than ignored.

 ZERO RISK COMMERCIAL OFFER

Free 2-Day Live Clinic Trial

Test SwasthAI during your busiest morning and evening OPD sessions.

₹0 Setup Fee · No Hardware Required · 10–Minute Reception Onboarding.
